- Global Warming is a subset of Climate Change >> just weather
- Climate Change is increasing the acidity of the ocean
- Earth's coral reefs will be dead by 2080 if we don't act now
- Commercial fish populations will be wiped out by 2048
- Dead Zones cover 1000's of sq Miles @ river deltas across Earth
- 2 greenhouse gas areas poised to double or triple CO2 in the air
- 850 new power plants will release 2.7 B tons of CO2
- Kyoto only reduces CO2 emissions by 483 M tons

With your help we can solve these problems—tell everyone how!
